

# Montracon Flat Platforms

Carr Hill, Doncaster, DN4 8DE

01302732500 | [sales@montracon.com](mailto:sales@montracon.com) | [www.montracon.com](http://www.montracon.com)

# Features

The platform skeletal is supplied with recessed twistlocks and doubles, as either a skeletal, to handle the full range of ISO containers, or as a flat platform.

Montracon offers a choice of lighting packages, including the LED - the preferred choice for improved performance and longevity.

Underslung tool/equipment storage boxes available as an option.

The option of sockets and stanchions extends the load versatility of the flat to include the movement of all, from logs, to oil field drilling equipment. Stanchions are neatly stowed beneath frame, or on the headboard.

Channel section side rave is offered as an alternative to the standard heavy duty rave.

29mm hardwood floor as standard, with other floor types available also.

Easy matching to dock heights to facilitate loading/unloading at the rear - an optional raise/lower valve is used to adjust platform height - an automatic trip ensuring the trailer returns to 'normal' running height.

Special design headboards available to suit customer requirements.

Whatever your trailer requirement may be and wherever in Great Britain or Ireland you are, we will be happy to visit and to discuss how Montracon can best meet your needs.

Montracon reserve the right to change specification and the status of standard optional features at any time.

# Flat Platforms

*Unbeatable versatility.*

Montracon exploits fully the versatility of the Flat Platform trailer, specifically in producing a range of model derivatives, including dual purpose units that offer the flexibility to handle a wide and diverse range of payloads, a flexibility unmatched by any other trailer type.

## Why Montracons'?

Renowned for Quality, Strength, & Longevity

Enviably proven performance

Low maintenance

15mm main beam flange as standard

Extensively configurable

Extensive warranty ✓

Montracon's reputation for low overall cost of operation, with durability and longevity forged for almost 50 years of supplying the road transport, building and construction industries... the result is hard to beat.

Standard spec trailers are fitted with drum brakes and are available ex-stock, with a range of popularly specified options pre-engineered and available for fitting either on or off line to aid fast delivery.

Our engineers work closely with you, our customer, to develop bespoke designs matched to meet exact operating needs.

# Variants
